

Global Fusion Partners with Primary Innovations

April 2007

Global Fusion has recently signed a Partnership Agreement with Primary Innovations for the inclusion of real-time Video on Demand (VOD) and IPTV (Internet Protocol Television) services in its global network. This multi-continent agreement will provide real-time coverage to Asia-Pacific, Europe, Canada, Africa and the Caribbean for VOD and IPTV on top of existing services like Data Management, Fixed and Mobile VOIP as well as conventional Telco/Cellular services.

These services combined and offered to the existing target market of 35 million people are expected to generate USD700Million in revenues.

About Global Fusion

Global Fusion is an international Multi-Protocol Label Switching (MPLS) Carrier, capable of using copper, fiber and satellite-access technologies to create last mile solutions associated with multi-location Virtual Private Line Services (VPLS) and Virtual Private Network Services (VPN).

As a non-facilities-based Carrier providing private connections to any location including your Internet Service Provider, Global Fusion provides a complete end to end circuit terminating at your DMARC as ether a TDM *n* by DS-1/3 or Ethernet. Ordering, engineering, and handling of Global Fusion services is the same as any other telecom service, streamlining and familiarizing the processes.
